1. DMX control modes overview

The following DMX control modes are available in the JDC Line 500.

DMX Mode 1: RGBW Strobe

16 DMX Channels

RGBW strobe is a global strobe that uses all the White and all the RGB segments together. The strobe has flash, pulse and ramp-up/down effects as well as special intensity effects such as lightning. It offers RGBW control plus separate color temperature control that defines the fixture's white point.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

Control / Settings lets you configure the fixture remotely via DMX.

Mode 1 RGBW Strobe

RGBW strobe

1	Intensity coarse
2	Intensity fine
3	Duration
4	Flash rate (Shutter)
5	Intensity effects (Strobe mode)
6	Control / Settings
7	CTC
8	Red
9	Green
10	Blue
11	White

Background color

12	Intensity background
13	Red background
14	Green background
15	Blue background
16	White background

DMX Mode 2: W Strobe + RGB Strobe

34 DMX channels

White strobe with FX runs on the White segments only and has an effects engine with 50 patterns.

RGB strobe with FX runs on the RGB segments only and has its own effects engine with 50 patterns.

Both strobes let you control *crossfading* (duration of changes between the steps in each pattern) and *transition* (duration of changes from one pattern to the next).

Pattern chain length lets you set up a chain of fixtures for the pattern to run across – it defines the total number of fixtures in the chain. *Pattern chain position* lets you set which position in the chain the fixture will occupy: first, second or third etc. fixture in the chain.

Strobe phase lets you shift the timing of the RGB strobe by 1 – 359° relative to the White strobe. A 180° shift will result in a flip-flop between white and RGB flashes.

Pattern phase lets you shift the timing of the RGB pattern by 1 – 359° relative to the White pattern.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

Control / Settings lets you configure the fixture remotely via DMX.

Mode 2 W Strobe + RGB Strobe

White strobe with FX

1	Intensity coarse
2	Intensity fine
3	Duration
4	Flash rate (Shutter)
5	Intensity effects (Strobe mode)
6	Control / Settings
7	Pattern select
8	Pattern step / speed
9	Pattern step crossfading
10	Pattern transition
11	Pattern chain length
12	Pattern chain position

RGB strobe with FX

14	Intensity fine
15	Duration
16	Flash rate (Shutter)
17	Intensity effects (Strobe mode)
18	CTC
19	Red
20	Green
21	Blue
22	Pattern select
23	Pattern step/speed
24	Pattern step crossfading
25	Pattern transition
26	Pattern chain length
27	Position in chain
28	Strobe phase
29	Pattern phase

Background color

30	Intensity background
31	Red background
32	Green background
33	Blue background
34	White background

DMX Mode 3: W Strobe + RGB Pixel

84 DMX Channels

White strobe with FX runs on the White segments only and has an effects engine with 50 patterns. *Crossfading* sets the duration of changes between the steps in each pattern. *Transition* sets the duration of changes from one pattern to the next.

Pattern chain length lets you set up a chain of fixtures for the pattern to run across in a chase by defining the total number of fixtures in the chain. *Pattern chain position* lets you set which position in the chain the fixture will occupy: first, second or third etc. fixture in the chain.

RGB segments overall control gives overall output control of the individually controllable RGB segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects and a CTC Channel which lets you adjust the color temperature of the white output.

Strobe phase lets you shift the timing of the RGB segments strobe by 1 – 359° relative to the strobe on the White segments. A 180° shift will result in a flipflop between flashes on the two strobes.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

Mode 3 W Strobe + RGB Pixel

White strobe with FX

1	Intensity coarse
2	Intensity fine
3	Duration
4	Flash rate (Shutter)
5	Intensity effects (Strobe mode)
6	Control / Settings
7	Pattern select
8	Pattern step / speed
9	Pattern step crossfade
10	Pattern transition
11	Pattern chain length
12	Pattern chain position

RGB segments overall control

13	Intensity coarse
14	Intensity fine
15	Duration
16	Flash rate (Shutter)
17	Intensity effects (Strobe mode)
18	CTC
19	Strobe phase

Background color

20	Intensity background
21	Red background
22	Green background
23	Blue background
24	White background

RGB segments individual control

25	Red segment 01
26	Green segment 01
27	Blue segment 01
...	...
82	Red segment 20
83	Green segment 20
84	Blue segment 20

RGB segments individual control adjusts the color of the individual RGB segments. The output of these segments is determined by the *RGB segments overall control* channels (see above).

The upper and lower halves of each segment are controlled together, giving 20 RGB pixels.

Control / Settings lets you configure the fixture remotely via DMX.

DMX Mode 4: White + RGB Strobes + W Pixel

47 DMX Channels

White segments overall control gives overall output control of the individually controllable White segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects.

RGB strobe with FX provides an RGB color strobe that runs on the RGB segments only. It has an effects engine with 50 patterns. *Crossfading* sets the duration of changes between the steps in each pattern and *transition* sets the duration of changes from one pattern to the next.

Pattern chain length sets up a chain of fixtures for the pattern to run across in a chase – it defines the total number of fixtures in the chain. *Position in chain* lets you set which position in the chain the fixture will occupy: first, second or third etc. fixture in the chain.

Strobe phase lets you shift the timing of the RGB strobe by 1 – 359° relative to the White strobe. A 180° shift will result in a flip-flop between flashes on the two strobes.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

Mode 4 White + RGB Strobes + W Pixel

White segments overall control

1	Intensity coarse
2	Intensity fine
3	Duration
4	Flash rate (Shutter)
5	Intensity effects (Strobe mode)
6	Control / Settings

RGB strobe with FX

7	Intensity coarse
8	Intensity fine
9	Duration
10	Flash rate (Shutter)
11	Intensity effects (Strobe mode)
12	CTC
13	Red
14	Green
15	Blue
16	Pattern select
17	Pattern step / speed
18	Pattern step crossfade
19	Pattern transition
20	Pattern chain length
21	Position in chain
22	Strobe phase

Background color

23	Intensity background
24	Red background
25	Green background
26	Blue background
27	White background

White segments individual control

28	White segment 01
...	...
47	White segment 20

White segments individual control adjusts the output of the individual White segments. The overall output of these segments is determined by the White segments overall control (see above).

Control / Settings lets you configure the fixture remotely via DMX.

DMX Mode 5: Multipix

98 DMX Channels

White segments overall control gives overall output control of the individually controllable White segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects.

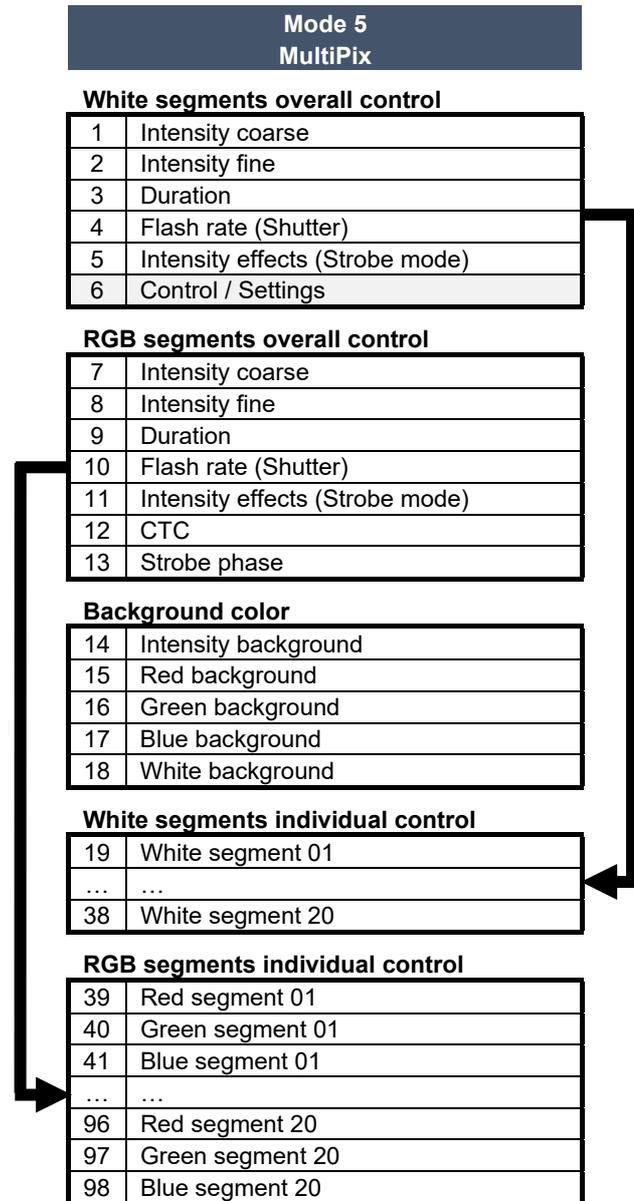

RGB segments overall control gives overall output control of the individually controllable RGB segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects and a CTC Channel which lets you adjust the color temperature of the white output.

Strobe phase lets you shift the timing of the RGB segments strobe by 1 – 359° relative to the strobe on the White segments. A 180° shift will result in a flipflop between flashes on the two strobes.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

White segments individual control adjusts the output of the individual White segments. The overall output of these segments is determined by the *White segments overall control* channels (see above).

RGB segments individual control adjusts the color of the individual RGB segments. The output of these segments is determined by the *RGB segments overall control* channels (see above).

The upper and lower halves of each RGB segment are controlled together, giving individual RGB control of 20 RGB pixels in total.

Control / Settings lets you configure the fixture remotely via DMX.

DMX Mode 6: MultiPix Advanced

158 DMX Channels

White segments overall control gives overall output control of the individually controllable White segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects.

RGB segments overall control gives overall output control of the individually controllable RGB segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects and a CTC Channel which lets you adjust the color temperature of the white output.

Strobe phase lets you shift the timing of RGB segments strobe by 1 – 359° relative to the strobe on the White segments. A 180° shift will result in a flipflop between flashes on the two strobes.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

White segments individual control adjusts the output of the individual White segments. The overall output of these segments is determined by the *White segments overall control* channels (see above).

RGB segments individual control (upper, lower) adjusts the color of the individual RGB segments. The output of these segments is determined by the *RGB segments overall control* channels (see above).

Mode 6 MultiPix Advanced

White strobe

1	Intensity coarse
2	Intensity fine
3	Duration
4	Flash rate (Shutter)
5	Intensity effects (Strobe mode)
6	Control / Settings

19	White segment 01
...	...
38	White segment 20

RGB segments individual control (upper, lower separately)

39	Red segment 01
40	Green segment 01
41	Blue segment 01
...	...
156	Red segment 40
157	Green segment 40
158	Blue segment 40

The RGB segments are split into upper and lower halves with individual control of each half. This gives individual RGB control of 40 RGB pixels in total.

Control / Settings lets you configure the fixture remotely via DMX.

DMX Mode 7: MultiPix Quadpix

38 DMX Channels

White segments overall control gives overall output control of the individually controllable White segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects.

RGB segments overall control gives overall output control of the individually controllable RGB segments at the end of this DMX mode (see below). It offers the standard strobe channels for intensity and strobe effects and a CTC Channel which lets you adjust the color temperature of the white output.

Strobe phase lets you shift the timing of RGB segments strobe by 1 – 359° relative to the strobe on the White segments. A 180° shift will result in a flipflop between flashes on the two strobes.

Background color sets a background color on the RGB segments. As standard, the main color output always has higher priority than the background color. You can define how background color and main color are mixed using *Background color* on the *Control/Settings* channel.

White quad segments divides the 20 White segments into 5 quad segments, each containing 4 segments, and gives intensity control. The overall output of these quad segments is determined by the *White segments overall control* channels (see above).

RGB quad segments divides the 20 RGB segments into 5 quad segments, each containing 4 segments, and gives RGB control. The overall output of these

quad segments is determined by the *RGB segments overall control* channels (see above).

Control / Settings lets you configure the fixture remotely via DMX.

2. DMX control channel layout

In the following DMX channel layout tables:

- Default settings are indicated with **bold type**.
- Where commands are followed by (3s hold) you must send that value continuously for 3 seconds (or other duration if indicated in the table) to apply the command.
- Some commands on the Control / Settings channel require the DMX value zero to be sent first and then moved directly to the DMX value required by the command concerned.

DMX Mode 1: RGBW Strobe

16 DMX Channels

Control / Settings channel

The Control / Settings commands listed below are available on Channel 6 in every DMX mode.

Channel	Command	DMX range		Percent %		Default DMX	Fade
6	No function	0	11	0	4.3	0	Snap
	Dimmer curve: Soft / square law (3 sec.)	12	14	4.7	5.5		
	Dimmer curve: Linear (3 sec.)	15	17	5.9	6.7		
	No function	18	26	9.4	10.2		
	Display mode: Off (3 sec.)	27	29	10.6	11.4		
	Display mode: Auto (3 sec.)	30	32	11.8	12.6		
	Display mode: On (3 sec.)	33	35	12.9	13.7		
	No function	36	38	14.1	14.9		
	Display orientation: Normal (3 sec.)	39	41	15.3	16.1		
	Display orientation: Inverted (3 sec.)	42	44	16.5	17.3		
	Display orientation: Auto (3 sec.)	45	47	17.7	18.4		
	No function	48	50	18.8	19.6		
	No signal: Blackout (3 sec.)	51	53	20.0	20.8		
	No signal: Hold (3 sec.)	54	56	21.2	22.0		
	No signal: House Light (3 sec.)	57	59	22.4	23.1		
	No function	60	65	23.5	25.5		
	Flash style: Normal (3 sec.)	66	68	25.9	26.7		
	Flash style: Xenon (3 sec.)	69	71	27.1	27.8		
	No function	72	77	28.2	30.2		
	White Point: Off (RAW) (3 sec.)	78	80	30.6	31.4		
	White Point: 8000K (3 sec.)	81	83	31.8	32.6		
	White Point: 6500K (3 sec.)	84	86	32.9	33.8		
	White Point: 5600K (3 sec.)	87	89	34.1	34.9		
	No function	90	101	35.3	39.6		
	Fan mode: Regulated (3 sec.)	102	104	40.0	40.8		
	Fan mode: High (3 sec.)	105	107	41.2	42.0		
	Fan mode: Medium (3 sec.)	108	110	42.4	43.1		
	Fan mode: Low (3 sec.)	111	113	43.5	44.3		
	No function	114	140	44.7	54.9		
	Pixel Mirror: Off (3 sec.)	141	143	55.3	56.1		
	Pixel Mirror: x-mirror (3 sec.)	144	146	56.5	57.3		
	Pixel Mirror: y-mirror (3 sec.)	147	149	57.7	58.4		
	Pixel Mirror: x-y-mirror (3 sec.)	150	152	58.8	59.6		
	No function	153	173	60.0	67.8		
	Background color: Override (3 sec.)	174	68.2	176	69.0		
	Background color: Crossfade (3 sec.)	177	179	69.4	70.2		
	Background color: Mix Color (3 sec.)	180	182	70.6	71.4		
	No function	183	185	71.8	72.6

No function	198	209	77.7	82.0			

Control / Settings (continued)	Save as Settings Preset 1 (move directly from zero, 5 sec.)	210	212	82.4	83.1		
	Save as Settings Preset 2 (move directly from zero, 5 sec.)	213	215	83.5	84.3		
	Save as Settings Preset 3 (move directly from zero, 5 sec.)	216	218	84.7	85.5		
	No function	219	221	85.9	86.7		
	Load Settings Preset 1 (3 sec.)	222	224	87.1	87.8		
	Load Settings Preset 2 (3 sec.)	225	227	88.2	89.0		
	Load Settings Preset 3 (3 sec.)	228	230	89.4	90.2		
	Load Settings Default (3 sec.)	231	233	90.6	91.4		
	No function	234	251	91.8	98.4		
	Reboot fixture (3 sec.)	252	255	98.8	100		

To reduce the risk of accidentally changing settings, the commands on the Control / Settings channel must be held for a certain time before they are executed. The above table indicates the number of seconds that you must hold a command.
